Website

Website Is a Representative view of a Company or Industry, Website is a group of associated web pages that may cover text, images, audio and video. The first page of a website is called home page. Each website has explicit internet address (URL) that you need to arrive in your browser to entire a website.

✓ Static Website

Website Is a Representative view of a Company or Industry, Website is a group of associated web pages that may cover text, images, audio and video. The first page of a website is called home page. Each website has explicit internet address (URL) that you need to arrive in your browser to entrée a website.

Website is hosted on one or more servers and can be opened by visiting its homepage using a computer network. A website is accomplished by its owner that can be an individual, company or an organization.

Static website is the rudimentary type of website that is informal to create. You don't need web programming and database design to create a static website. Its web pages are coded in HTML.

✓ Dynamic Website

Dynamic website is a collection of dynamic web pages whose content changes dynamically. It accesses content from a database or Content Management System (CMS). Therefore, when you alter or update the content of the database, the content of the website is also altered or updated.

Dynamic website customizes client-side scripting or server-side scripting, or both to generate dynamic content.

Client-side scripting generates content at the client computer on the basis of user input. The web browser downloads the web page from the server and processes the code within the page to render information to the user.

In server-side scripting, the software runs on the server and processing is completed in the server then plain pages are sent to the user.

✓ eCommerce Website

Email Campaign

E-Mail Services

Email marketing services will save you money and give you a great return on your investment. E-mail services allow you to create marketing materials that you can send directly to your contacts. Often these materials can be enhanced with product or website links, providing great chances for transactional marketing. Plus, ads and newsletters sent through email marketing services are incredibly easy for your contacts to share with others because you can add built-in Like and Tweet buttons. These elements also help build your social media following.

Another benefit of bulk email marketing is specific reporting on how successful a campaign is. You'll get customized reports about which marketing tools are working and what needs to be improved. You can even use a mass email service to test customer retention and loyalty by sending special discounts to repeat customers.

- Analysis of your current website.
- Identification of keywords.
- Implementation of keywords in your website content.
- Submission of your website to major search engines.
- Rechecking the placement your website with search engine registration.
- And finally checking your website how it placed with search engines.

On - Page Search Engine Optimization:

Introduction content on the pages comprises much more than script and copy pasting. To be able to reach your audience, you need to deploy the content on the website, keep it renewed, clear, interesting. Good content, articles, blogs, all need to be such that not only render information and knowledge to the reader but also hold their interest as well as that of the search engines!!

Creative work (Graphic Design & Multimedia)

- ✓ Logo Design
- ✓ corporate identity
- ✓ Calendar design
- ✓ Box Design
- ✓ Dairy Design
- ✓ Gift Items
